

Sunflower Meal – Cold Pressed

Our Sunflower Meal is derived from New Zealand grown GE free, high oleic sunflower seed. A cold pressing process is used to extract the high oleic oil from the seed without the use of heat or chemicals. This gentle process ensures all nutritional benefits are retained (amino acids and fatty acids) in the meal, preserved and made available for the animal to utilise in their natural state. Sunflower meal is not a complete feed and therefore should be applied into a balanced diet for your stock.

Key Benefits

- Premium quality mid protein to build body condition of the animal
- Low in starch and sugar providing a cool source of energy
- Higher fat levels for energy and body condition
- Sunflower meal provides calories in a highly digestible form
- As we cold press year-round, meal is supplied fresh which ensures the nutritional value is retained and available for the animal

For Best Results

- Introduce feed slowly and adjust feeding rates upon desired growth rates
- Feed in conjunction with forage (pasture, hay and/or chaff)
- Sunflower meal does not contain added vitamins or minerals and should be fed as part of a balanced diet (high in fibre)

Supply

Available for supply on weekly/monthly basis therefore reducing storage with short and long term pricing options. Suitable to feed in a variety of grain and meal feed systems. Stores in silos. Meal supplied in chip or milled form.

Available in 1000kg bag or bulk deliveries

Major Nutrients	per 1kg
Digestible Energy	13.2DE
Crude Protein	26%
Crude Fat	14%
Crude Fibre	31%
Moisture	7%
