

NOT SO DUSTY

DUST SUPPRESSANT

The Why

Is billowing dust from roads driving you nuts? Why not get back to a time when you can sit outside, the kids can play on the lawn, you can dry washing and leave windows open in your house.

Don't let dust dictate your life!

The Solution

Not So Dusty is a product that provides a full dust mitigation strategy for those times of the year when dust gets out of control. Not So Dusty meets your dust challenges head on by improving; air quality, safety for drivers and pedestrians, and protecting the environment at your work site (or your home) and keeping your neighbours on side.

Where To Use

Roads - suppresses dust on unsealed roads and help maintain the surface and therefore decrease maintenance costs. Reduced road dust within 200M of your home.

Hardstands yards - mitigates the impact of dust on worker safety for air quality and driver visibility, also improves conditions for plant and equipment.

Cleared building sites - mitigates the impact of dust on worker safety.

Stockpiles of shingle / dirt – prevents the generation of airborne dust and product loss in stockpile or during transport and keeps your neighbours happy.

Environmental management - mitigate the impact of dust on the surrounding environment and on communities.

How To Use

- » Mix 1 part Not So Dusty with 1 part water, paddle mix until the solution is consistent.
- » Spray onto the target area at 1L (of mixed solution) per square meter. For best long-lasting results on roads and driveways apply Not So Dusty onto the high activity area of the road (3M cross section covering wheelruts). Don't cover the outside 1M section to the section of the road as the dust suppression is somewhat wasted out in that section.
- » Apply with large industrial sprayer or any farm type sprayer (multiple applications (3-5 passes) is also recommended when applying 1L per sqm
- » If your road gets graded, all is not lost! You will need to apply more Not So Dusty but only at 50% of the rate (0.5L of mixed solution). The road will have retained dust suppressant so you only need to treat the new layer of gravel and dust.

Not So Dusty can also support dust suppression with water trucks in construction areas - please contact for further information.

Product Features

Non-hazardous cold pressed vegetable oil and non-ionic surfactant. Can be stored up to 24 months before use.

Non-corrosive & safe wipes clean from surfaces that are unintended for application e.g. vehicles, windows, concrete etc.

Simple & easy to apply recommended application is 50:50 with water and sprayed as 1L/sqm.

Economic with 1 to 2 applications per season for general use areas (\$1-2/sqm + application cost).

Water resistant the vegetable oil binds to dust and is not washed away by rain.

Biodegradable Not So Dusty biodegrades in a short period of time.

Dries completely odourless once dried, Not So Dusty will slightly darken the sprayed area, without any odour.

Environmentally safe no adverse impacts are caused to the environment.

New Zealand produced and manufactured product Not So Dusty has been developed and is manufactured by Pure Oil New Zealand Limited, at its oilseed facility in Rolleston, Canterbury. The product contains rapeseed oil grown in the South Island and is blended with other products to maximise the dust suppression properties.
